

**\*\*\* ATTENTION \*\*\***

**NOTE FROM THE AUTHOR - PLEASE READ BEFORE YOU BUY!!!**

Because of some feedback about the book and that it is not actually true to fact about the exact procedures that are done on the flight deck during take-off and landing I have elected to issue this statement.

If you are purchasing this book because you want to do exactly the same procedures as real pilots do in flying the Boeing 737 then this is not the book for you. I have never stated that all procedures that the book outlines are exact procedures that real pilot's use. This book was not intended to teach the person buying this book to fly a real Boeing 737. As stated in the book it was to assist the novice as well as the experienced flight simmer how to successfully fly the Boeing 737 in Microsoft Flight Simulator. If the type of tutorial you are looking for is to really learn how to fly a Real Boeing 737 then I suggest you take lessons to become a real pilot.

Also, it was mentioned that all of the material in this book can be found on the internet. I do not dispute this however if you like spending hours searching the internet to obtain this information then again this is not the book for you. Again I made this book to assist the flight simmer and to have all of the necessary information immediately at hand for the simmer.

Finally in closing due to a risk to National Security and what had occurred during 911. Even if I knew everything a real pilot did during all phases of flying this beautiful plane I would not have put that information in the book. Being a military veteran and proud to be an American I am in no way looking to assist any terrorist groups in any way to plan another 911. I track all hits to this page and at least 30% are from the middle east. If you can not understand that this book is only intended for the enjoyment of using flight simulator and you feel you were mislead then I sincerely apologize.
